TOOLS LIST:

Electric Drill & Screwdriver

Wood Router (if needed to make channel in back of wood)

Wire Cutter

Wire Stripper

1. Prepare wood base by painting or refinishing for the look you want.
2. Measure and mark where you want the wires in the wood.
3. Drill holes for wire as well as holes for ceiling mounting.
4. Cut wires to desired length for how long you would like each bulb to hang
5. Strip at least 1 inch of cloth and plastic coating on both black and white wires.
6. Disassemble the sockets. One at a time thread the wire through top of socket.
7. Attach black wire to copper screw and white wire to silver screw.
8. Reassemble socket and repeat with remaining sockets.
5. String wires through holes and staple wires into place on back side.
6. Cut 2-4 foot wire that will be attached into ceiling and strip both ends.
7. Join one end with all socket wire ends of black and white wires.
8. Twist copper together, add wire nut and use electrical tape to hold secure.
9. TURN OFF YOUR BREAKER!
10. Wire your other end of the 2-4 foot wire into the ceiling.
11. Mount wood onto ceiling with proper screws and anchors.
