INCLUDED IN THIS KIT:

Double-Sided *Green Tea & Cypress* Crepe

Double-Sided *Ferns & Moss* Crepe

Extra-Fine *Copper* Crepe Paper

50 Green Wires - *24-Gauge*

50 Spun Balls - *6mm*

70 Spun Balls - *8mm*

FOR CUTTING CREPE:

Cutting Machine or

3mm Pinking Sheers & Fringe Clip

TOOLS YOU WILL NEED:

- ◯ Detail Scissors
- ◯ Craft Scissors
- ◯ Bearly Art Craft Glue
- ◯ Hot Glue Gun
- ◯ Wire Cutters
- ◯ Paint Brush
- ◯ Red Paint
- ◯ Mod Podge
- ◯ Brown Marker
- ◯ PanPastel - *Green Ex. Dk. 660.1*

(FOR PERSONAL USE ONLY)

1 For this wreath you will need three stems of the holly berries and leaves.

2 Cut 9 wires into 3 pieces. (4 inches long each).

3 Glue a 6mm spun ball onto the end of each wire.

4 Paint all of the balls with a red craft paint. Place the wire into the foam cake round and allow to dry fully.

5 Glue a 4 inch long wire onto the edge of first holly leaf half, then cover the wire with the other half. Press and seal with fingers.

6 On both sides of the holly leaves, brush and blend the green PanPastel at base, leaving crepe color at tops of leaves.

7 Paint Mod Podge on both sides of the leaves. Note that the leaves will start to warp as you add the liquid.

8 Paint all of the red holly berries with a coat of Mod Podge. Place in foam and allow to dry.

9 For each of the holly cluster stems you will need 9 leaves. For the three stems make 27 leaves total.

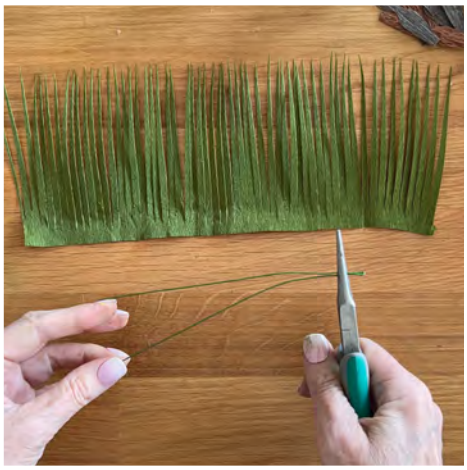
10 Cut the end of the multi-folded copper crepe paper against the grain to create a stem wrap.

11 Using white glue to attach, wrap the holly leaf stems with the copper crepe.

12 Starting with three leaves, wrap stems together, then add a cluster of 5 berries, adding more leaves, the remainder of the berries then final leaves to create a branch.

13 For the wreath, make three branches of two long pine stems. Make three pine cones that you can attach to branch or use individually.

14 Straighten the long pine needles with your fingers.



15 Fold one wire in half.

16 Glue end of pine needle strip around the tip of the folded end of the wire.

17 Continue to glue and wrap down the wire to create a long pine stem.

18 Finish the stems by wrapping with copper crepe and glue.

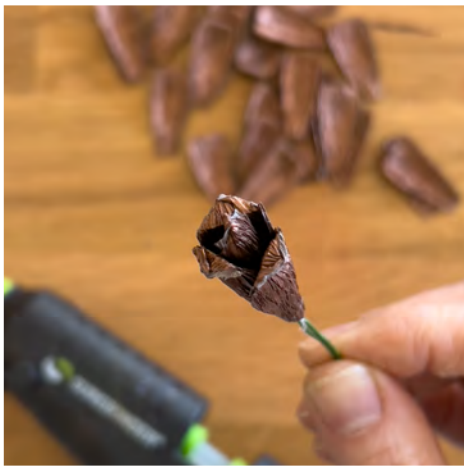
19 Attach two stems together to create a branch. Repeat to make a total of three branches.

20 Twist the pine cone piece twice to see same color on both ends.

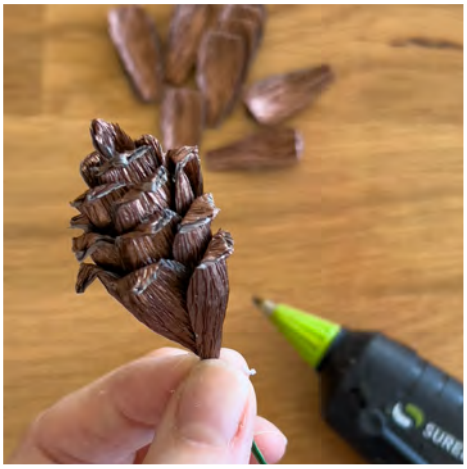
21 Fold with copper side facing out adding glue between the two layers at the base of the piece. Each pine cone will need 30 pieces.

22 Fold a wire in half then glue one piece at one end of the wire, wrapping the piece as shown.

23 Fold the tip of each piece, then stretch the center gently in the direction of the point, to cup. Repeat with all pieces.



24 Using the hot glue gun to glue the pieces around the center, overlapping each piece.



25 Continue to glue each piece evenly around the wire, moving down evenly to create a pine cone pattern.

26 Finish by wrapping the wire with the copper crepe strip.

27 Use fingers to open up the pine cone and give it shape.

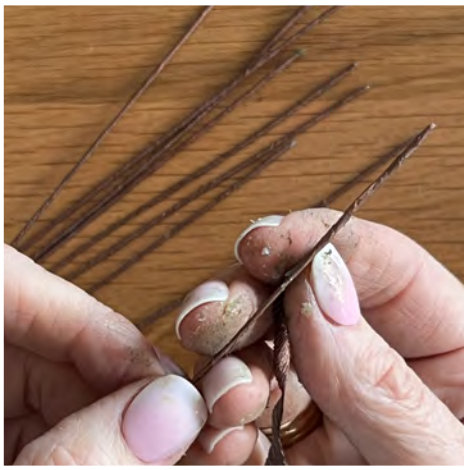
28 For the wreath, make 6 Spruce branches, with three stems of needles on each branch.

29 Fold wire in half and glue the needle strip onto the wire to create a stem of needles about 3 inches long.

30 Cover the remaining of the stem with the copper crepe strip. Repeat with the remainder of the Spruce stems.

31 Create branches by attaching two staggered stems with the copper crepe strip and glue, then add a third. Finish the stem with the crepe wrap.

32 For the wreath, make three branched of Snowberry. Each branch has three stems.



33 Cut 5 wires in half then cover 9 of the wires with the copper crepe strip and glue.

34 Glue a variety of clusters of 6mm and 8mm spun balls onto the wires. Add a second cluster down the wire on three stems.

35 Using a brown marker, add a small dot onto each berry.

36 Glue all of the Snowberry leaves together without a wire. Be sure to overlap the stems with plenty of glue to make a strong stem.

37 Glue the smallest two leaves, face to face under each cluster on all stems. Glue medium leaves facing each other down the stem. Attach two stems with copper crepe strip and glue.

38 Attach another two large leaves under the joint, then add the third stem, wrapping with crepe. Add another set of large leaves at the joint, then the last set. Finish the stem with crepe.

Final wreath includes: 3 LONG PINE BRANCHES, 3 PINE CONES, 3 HOLLY CLUSTERS, 3 SNOWBERRY BRANCHES & 6 SPRUCE BRANCHES

39 Gather the branches, extra wire and the gold hoop.

40 Arrange and wrap the wire stem of the long pine and pine cones around the gold hoop.

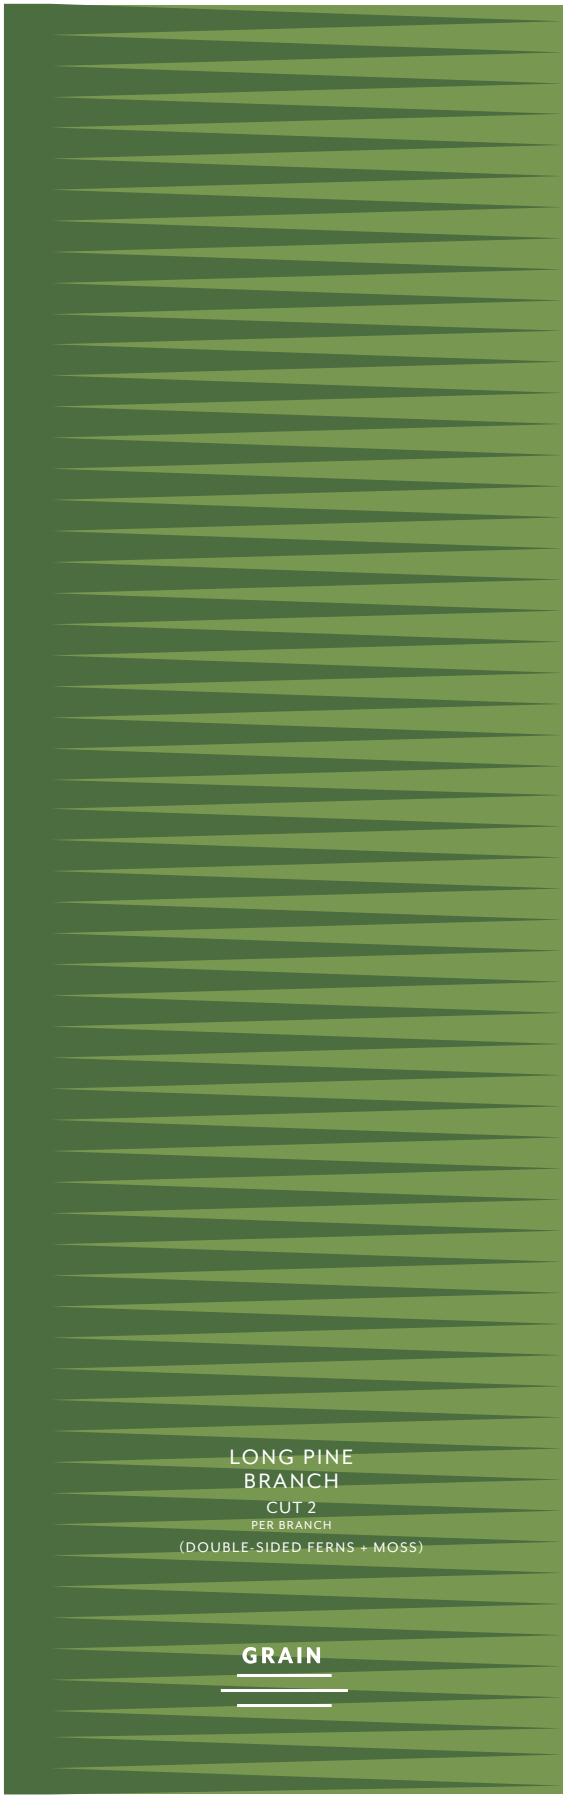
41 Add the clusters of holly using the 24-gauge wire wrapped to hold them in place securely.

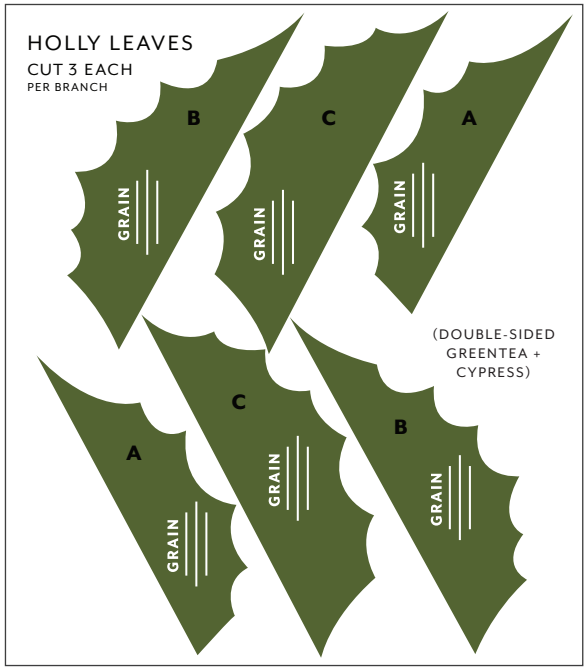
42 Add the Hollyberry in the center of the arrangement, wrapping the stems to secure.

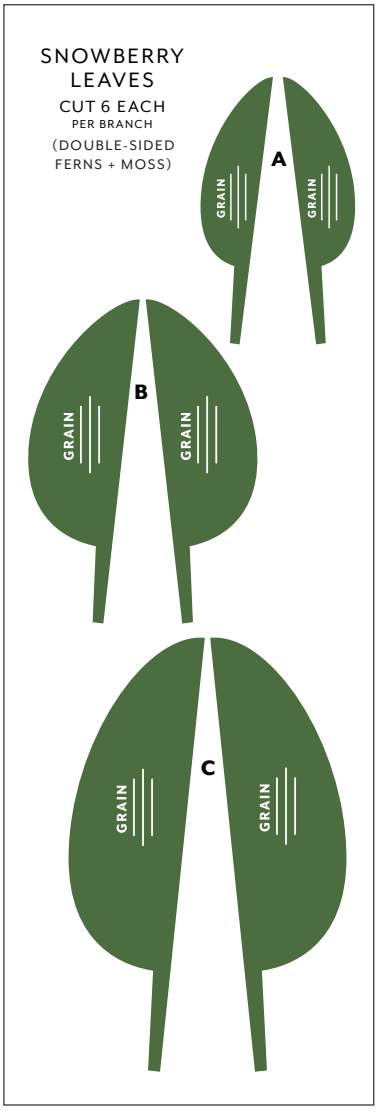
43 Attach the Spruce stems in areas that need more branches.

44 Move and arrange all of the branches and berries to create your final wreath.

CREPE PAPER WINTER WREATH







CUTTING MACHINE FOR CREPE

1. Download the file to computer. (Find in **DOWNLOAD** folder on your computer)
2. Double-click to unzip the file
3. From machine software, upload the unzipped file and place onto canvas
4. Read over the designer notes then hide layer
5. Press the make it button to view each mat
6. If file is unlocked, arrange pieces to maximize mat (do not rotate any templates)
7. Note: The folder includes locked SVG to maximize the paper, plus unlocked SVG for cutting flexibility
8. Click to proceed to cut settings

CUTTING MACHINE TIPS:

- For cutting crepe paper, use a ***rotary blade.***
- Cut your crepe paper ***12 inches wide***.
- Choose a ***mat with the right stick*** for best results.
- Place paper on mat with ***grain vertical***.
- Use a ***brayer*** to press the crepe to the mat.
- Once cut, remove the crepe paper pieces using ***needle-nose tweezers***.

CRICUT ROTARY CUT SETTINGS

EXTRA-FINE CREPE PAPER	
SETTING	PRESSURE
CREPE PAPER	DEFAULT

DOUBLE-SIDED CREPE PAPER	
SETTING	PRESSURE
COTTON	DEFAULT

NOTE: These settings may vary for each machine, blade use, and software updates. We recommend you test cut a small area before cutting a full mat of crepe paper
